

## Success at CA Technologies

# Anchal Katyal

Graduate of the Associate Software Engineering Program

Anchal got her start at CA by stopping by our booth at a UTD career fair. She applied for an open position, but was introduced to the ASE program during her interview process. Shortly after, she was brought on as a member of the Architect Prototyping team in our APM business unit.

As a member of the program, Anchal has learned fundamentals of the business as well as valuable career lessons, such as the importance of being Agile and developing critical thinking skills, “You aren’t expected to know all the answers, but you should know how to find them.”

In Anchal’s short time in her ASE role at CA, she has made a big impact. She helped to implement operational best practices for the APM Hackathon by designing a comprehensive setup guide, which included various examples illustrating RESTful APIs. This project gave Anchal the opportunity to explore the unknown and create something that was widely used and appreciated by the entire APM team.

### *Anchal’s Advice:*

*“Not many new graduates know which technology they want to work on. With CA’s ASE program, you get to work with different teams on different technologies. You’ll learn new skills and ultimately you’ll find your passion. Just be yourself and embrace change.”*

Current Position:

**Associate Software Engineer, APM**

ASE Rotations:

**Web App Development  
Application Performance Management**

Office Location:

**Santa Clara, California**

Background:

**Anchal graduated from the University of Texas at Dallas in May of 2015 with a Masters of Science Degree in Computer Science**
